Mechanical Ventilation Study Sheet - Straight A Nursing

Airways and Mechanical Ventilation There are two types of airways that are primarily used...the endotracheal and the tracheostomy. The goal with each of these is to maintain a patent airway and thereby effectively oxygenate the patient. For patients who cannot ventilate adequately, they will have mechanical ventilation. This is a supportive

Mechanical Ventilation Mid term study guide Resp1600 ...

Ventilation: the transfer of CO2 from the blood to the alveoli and out of the body . An important concept to remember: normal breathing is a negative-pressure phenomenon; mechanical ventilation is POSITIVE pressure ventilation. The end result is still airflow and gas exchange, but the mechanics are different.
